2.2	API VERSION 2.0:	4

1 INTRODUCTION

Welcome!

Please refer to the implementation guide for the Status Inquiry API (REST). This API is primarily utilized to obtain the final status of pending or missing transactions. It is recommended to call this API a minimum of **10 minutes** after transaction initiated.

Note: Only to confirm the pending transaction status, the **pp_PaymentResponseCode** parameter will be considered.

In the below example the '000' response code indicates that the API (status Inquiry API) operation was successful. The payment response code '121' indicates the transaction status (completed transaction).

pp_ResponseCode: '000', // This indicates that the 'Status Inquiry' API operation was performed successfully.
pp_ResponseMessage: 'Thank you for Using JazzCash, your operation successfully completed.'

pp_PaymentResponseCode: '121' // It means that the transaction is completed and the amount has been debited.
pp_PaymentResponseMessage: 'Sorry! Your transaction was not successful. Please try again later.'
pp_Status: 'Completed'

2 API ENDPOINTS:

2.1 FOR VERSION 1.1

Environment	Endpoints
Sandbox	https://onlinepayments.jazzcash.com.pk/payment-orchestrator/api/v1/rest/payments/status/inquiry
Production	https://onlinepayments.jazzcash.com.pk/payment-orchestrator/api/v1/rest/payments/status/inquiry
